BASIC-ABSTRACT:

A substrate is printed with an ink contg. acidic or basic
cpds. covered with
paper impregnated with an aminoplast, and pressed to give a
decorative board
having 3-dimensional effect. The curing of resin in the
printed areas is
accelerated (by acid) or delayed (by base) to form surfaces
optically different
from those of unprinted areas. In an example the
combination of a release
sheet, 5 layers of 190 g/m² Kraft paper impregnated with
phenolic resin, a
piece of 90 g/m² paper printed with water-based ink contg.
50% NaOH and
impregnated with 1:2 (molar) melamine-formaldehyde resin

(I) to 100 g/m², a
piece of 26 g/m² overlay paper impregnated with I contg.
0.001% curing agent
and 0.001% release agent to 55 g/m², and a 2-mm polished
stainless steel plate
was pressed 20 min. at 140 degrees C and 70 kg/cm².
